Strengthening Trust

Open Scientific Research and Research Integrity

Professor Dr Nada Trunk Širca
Assoc Professor Dr Aleš Trunk

International School for Social and Business Studies
University of Primorska, Slovenia

OPEN SCIENCE CONFERENCE · OPEN-ASIA
"From Data to Impact: Enriching Global Communities"
21–22 October 2026 · Hilton Kuching, Sarawak

Co-funded by the European Union

OPEN ASIA
UNIFYING SCIENCE, EMPOWERING INNOVATION
(Project Number: 101128493)

OPEN-ASIA’s shared foundation

Forum	Topics that inform today’s discussion
Mumbai · March 2024	Policies, institutional experience and open tools
Kuala Lumpur · October 2024	Community engagement, AI and legal frameworks
Patiala · February 2025	FAIR data and open research infrastructure
Kota Kinabalu · September 2025	Citizen science, stewardship and incentives

Today’s focus: decisions that make research dependable

OPEN-ASIA Open Science Forums, 2024–2025

Public trust in scientists

71,922

respondents

68

countries

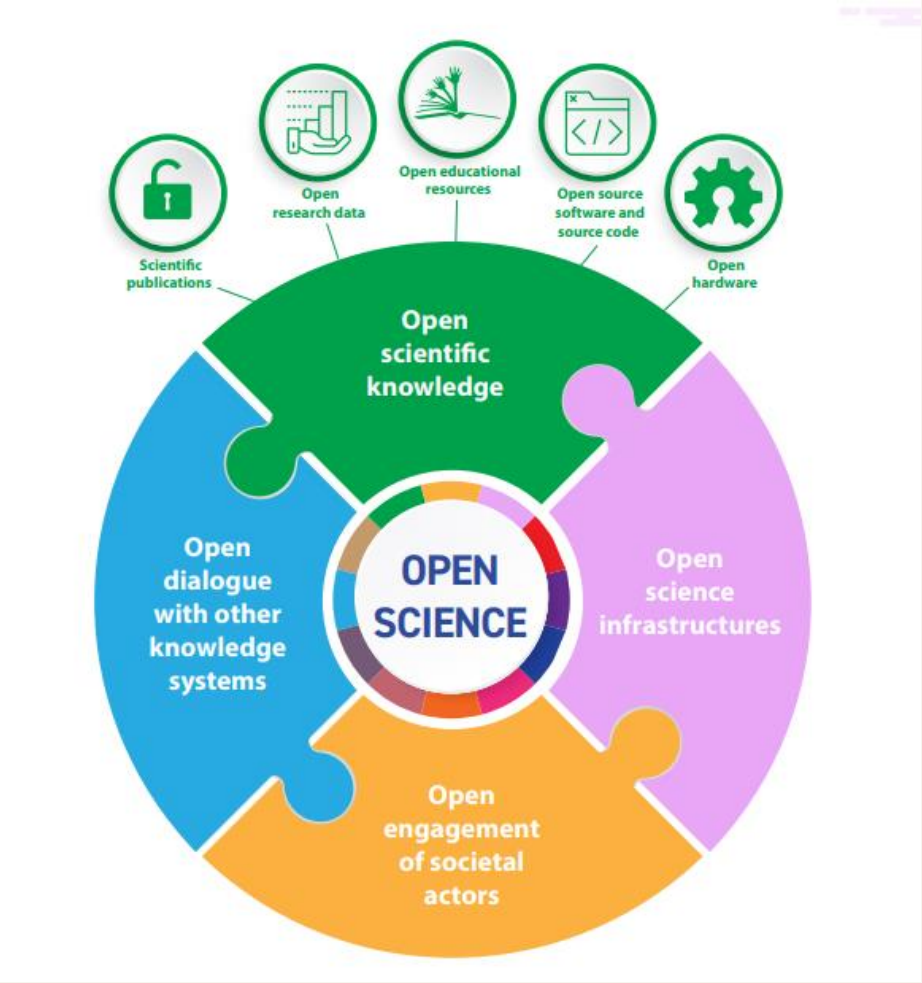

3.62 / 5

Overall mean trust
Moderately high

Perceptions of scientists do not establish the reliability of a specific study

Cologna et al., Nature Human Behaviour, 2025

Open science and public benefit

UNESCO (2021), Recommendation on Open Science, p. 11

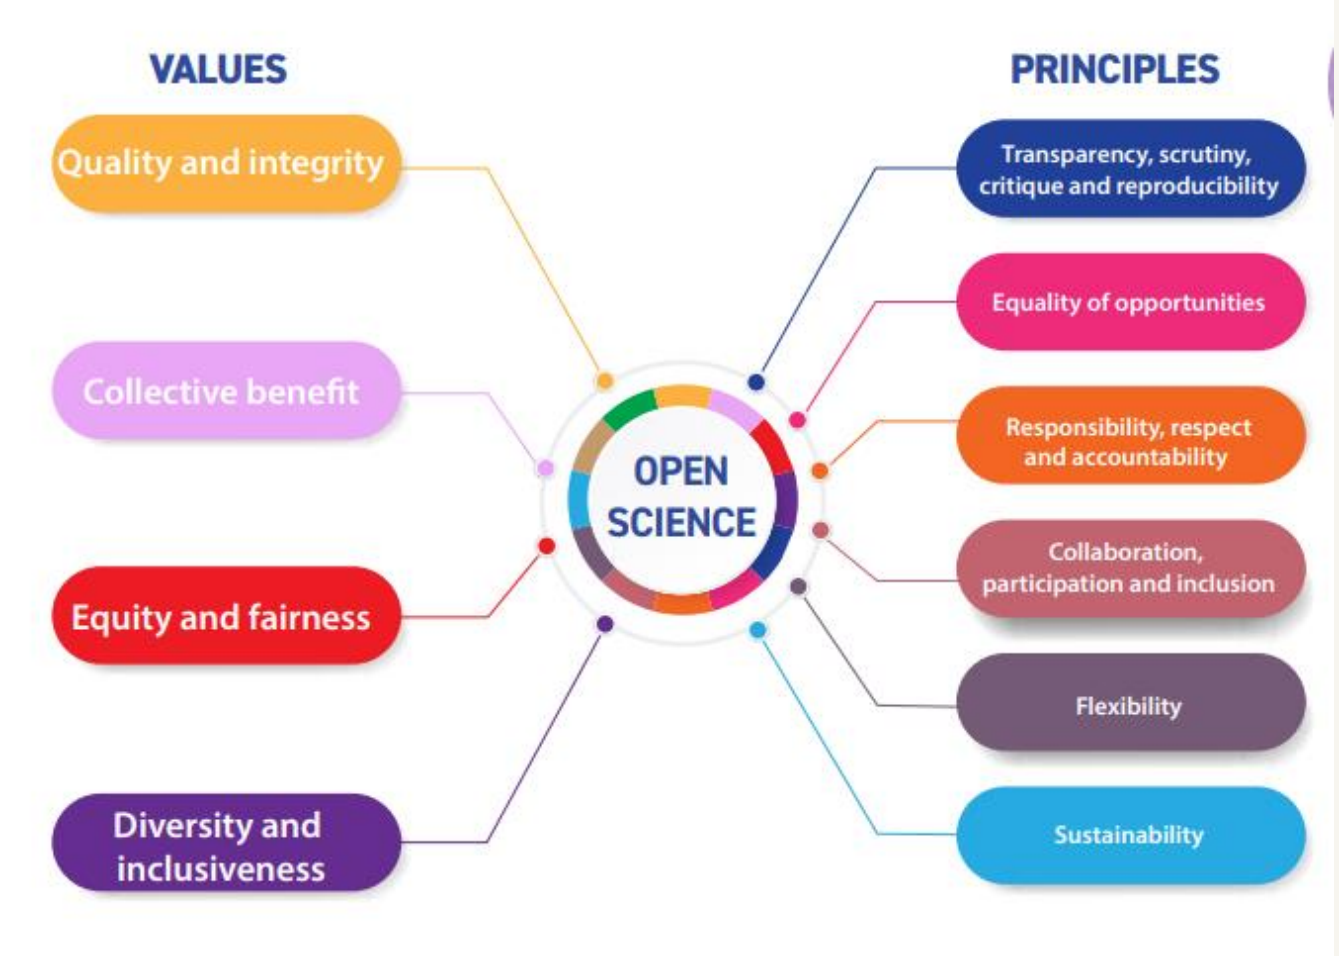

Publishing belongs within a wider open science approach

The article connects readers to the evidence and materials behind it

Sharing knowledge supports opportunities for scrutiny and use

UNESCO source

UNESCO values and guiding principles

Quality and integrity sit within UNESCO's values for open science

Transparent publishing gives these values practical expression

UNESCO (2021), Recommendation on Open Science, p. 19

UNESCO source

Four principles of research integrity

Reliability	Methods and analysis support the result
Honesty	Reporting makes the evidence and limits clear
Respect	Research protects people and their interests
Accountability	Someone takes responsibility for each decision

ALLEA, European Code of Conduct for Research Integrity, revised 2023

Ethics, integrity and openness

Dimension	Main question	Example evidence
Research ethics	Is the work acceptable?	Review and consent process
Research integrity	Is the work responsible?	Records and justified analysis
Open science	Can others engage with it?	Accessible methods and outputs

Each dimension requires evidence

Analytical distinction informed by UNESCO and ALLEA

The research record

Research stage	Record that supports scrutiny
Question and design	Protocol, rationale and planned analysis
Collection	Provenance, instruments and quality checks
Analysis	Code, software versions and decision log
Release	Linked outputs, versions and access conditions

Proposed checklist informed by the Singapore Statement, 2010

Planning and analytical flexibility

Before the analysis

Planned question
Outcomes and comparisons
Rules for exclusions

During the analysis

Documented changes
Exploratory findings
Reasons for each decision

The record explains changes to the plan

Slovenia: support for open publishing

Repository	RUP supports publications and research data
Advice	Support for licensing, APCs and journal credibility
Skills	SPOZNAJ training and guidance for FAIR practice
Assessment	UP joined CoARA in December 2024

Publishing research papers: shared responsibility

Perspective	Main responsibility	Question behind the decision
Publisher	A sustainable and accountable service	Can the published record endure?
Editor-in-chief	Independent editorial judgement	Does this paper merit publication?
Authors	Reliable evidence and honest reporting	Can we substantiate the claims?

Readers need evidence, access and a route for questions

The publisher’s perspective

Service	Resources for editorial work, production and preservation
Transparency	Clear ownership, fees, licences and journal policies
Integrity	Staff and procedures for concerns and corrections
Governance	Editorial decisions independent of revenue

COPE, DOAJ, OASPA and WAME · Principles of Transparency, version 4, 2022

The editor-in-chief’s perspective

Judgement	Scope, contribution and validity of the paper
Peer review	Appropriate expertise and managed conflicts
Decisions	Reasoned outcomes and a route for appeal
Independence	Authority over content without commercial pressure

ICMJE editorial freedom and peer-review guidance · COPE editorial independence

The authors’ perspective

Evidence	Complete methods, supported claims and stated limits
Credit	Agreed authorship and transparent contributions
Disclosure	Funding, conflicts, ethics and relevant AI use
Responsibility	Final approval and responses after publication

ICMJE authorship guidance · NISO CRediT contributor taxonomy

The role of open-access publishing

Access and reuse

Articles available without a reader paywall

Clear permissions for reuse

Wider opportunities for scrutiny and application

Quality and trust

Editorial judgement

Appropriate peer review

Transparent evidence and correction processes

Access conditions and quality assurance need separate attention

Budapest Open Access Initiative, 2002 · Trunk Širca, Patiala, 2025

Open-access routes and funding

Route	Where readers access the paper	Funding / condition to check
Green	A permitted version in a repository	Version, rights and any embargo
Gold	An article in a fully OA journal	APC or other funding model
Diamond	A fully OA journal with no author fee	Institutional or collective support
Hybrid	An OA article in a subscription journal	APC or agreement, if applicable

Diamond is a form of gold OA. Fees and access routes are different questions.

Journal credibility and the author’s decision

Identity	Verifiable publisher, board and subject relevance
Review	A clear process with credible expertise
Terms	Transparent charges, licences and deposit rights
Track record	Readable articles and a visible correction policy

AI in manuscripts and peer review

Authors	Verify outputs and disclose relevant use
Reviewers	Protect confidentiality and follow journal rules
Editors	Apply a transparent policy and maintain oversight

Human researchers retain responsibility for the published work

European Commission, May 2026 · ICMJE peer-review guidance

The published record: correction and retraction

Correction	A documented error needs a linked notice
Concern	Unresolved issues may require an expression of concern
Retraction	Unreliable findings may require withdrawal
Investigation	Institutions investigate conduct through a fair process

ICMJE corrections, version control and misconduct guidance

Institutional responsibilities

Role	Responsibility in the proposed workflow
Research team	Evidence quality and release documentation
Data steward / library	Metadata, deposit and reuse support
Ethics / governance lead	Permissions, risks and access decisions
Research support / integrity	Advice, fair assessment and response to concerns
Institutional leadership	Resources, oversight and escalation route

Proposed division of responsibilities · informed by repository TRUST principles

Research assessment and useful indicators

Proposed indicator	Denominator / review question
Documented access conditions	Eligible outputs under the institution’s policy
Independent computational check	Eligible projects using computational analysis
Transparent contributions	Authorship and contribution statements in eligible papers

Qualitative review explains what the counts mean

Trustworthy publishing for community impact

Can readers examine the evidence?

Can they access and use the paper?

Who responds when concerns arise?

Discussion · 3 minutes after the closing remarks
